## Arctic Re-Healing Foam

Arctic Re-Healing Foam (RF3X6) is a fire fighting concentrate developed by 3M Australia for the control and extinguishment of Class B flammable liquid hydrocarbon and polar fuel fires.

Arctic Foam RF3X6 ATC represent a new innovative product offering an environmental benign alternative to traditional foams.

Due to the reinforced bubble structure, Arctic RF3X6 ATC has the ability to flow rapidly and freely across the surface of a hydrocarbon flammable liquid fuel despite no film formation.

What makes the foam unique compared to other film forming foam is that it does not contain any organo-halogen surfactants and bio-degrades to natural occurring compounds in the long end.

Arctic RF3X6 ATC has been successfully designed for fire fighters fighting "Class B" fires and is for use by fire services such as Municipal Fire Brigades, Civil Aviation, Military, Industrial Fire Services etc ...

- NEW TECHNOLOGY
- BIODEGRADABLE
- EN 1568
- FOR ASPIRATED USE
- FOR NON-ASPIRATED USE
- ENVIRONMENTALLY BENIGN

When proportioned with water at 3% on non-polar and 6% on polar liquids and applied with conventional air aspirated and non-air aspirated fire fighting equipment, this "Class B" fire fighting foam agent provides rapid fire control and extinguishment.
